entry and exit for workflow)

Admin Settings Enhancements

Oracle Agile PLM Feature Summary (v. 9.3.3 - 9.3.6)

Product Portfolio Management (PPM) Features					
Features -new dashboard at ab -new bar reconfigured (search, forw/back, etc) -special flow orking day calendars for exceptions -untility window (always up, drawers explode, -toritex sensitive, keep searching regardless of -drag/drop between windows -wandering mouse curser worn't open windows (fix) -nav display (displays BOM, search results, pro) data to ref as navigate to other records) -sex personal preference for (sort) -avitified sloplay filters, column order, preference -windows -drafticety on a displays like javs client can view -drellies while editing) -Authorius rediliting (fields) -Attribute redilining (fields) -Attribute redilining (fields) -Attribute redilining (fields) -Authorius be and search very lead attile to rediliting) -Authorius be and search very lead attile to field data) -Type ahead lists (values appear based on whats to kiped so far) -Authorius be andered of displays) -Authorius to enter field data) -Type ahead lists (values appear based on whats to kiped so far) -Authorius covered from ulti-project GANTT (and remove lock in order) -Authorius to enter fields) -Authorius to enter field data) -Type ahead lists (values appear based on whats to kiped so far) -Quickview enhancement (invokes popup display of details and can open from any location) -Autoward Designation on search (rather than cycle between page, now scroll) -Automatic pagination on search (rather than cycle between page, now scroll) -Automatic pagination on search (rather than cycle between page, now scroll) -Automatic pagination on search (rather than project GANTT (anuch. Multi-project GANTT (and remove lock inches) -Resource GANTT management (pre-defined and custom lived files based on visible and searce in fields as valiable and searce with HTML markup and journaling) -Reve PLM Application Features -Authorius feet and sipplay in popu put put put put put put put put put p	To: 9.3.3	To: 9.3.4	To: 9.3.5	To 9.3.6	
-new dashboard a tab -new dashboard a tab -new bar recording group (search, forw/back, etc) -sys utility toolbar (online docs, tools/settings) -utility window (always up, drawers explode, cortext sensitive, keep searching regardless of primary screen) -drag/drop between windows record of drag/drop between windows -wandering mouse curser won't open windows (fix) -nav display (displays BDM, search results, proj data to ref as navigate to other ecords) -set personal preference for (sort order, ordice) -content Authoring (large text fields available across all Agile PLM objects, are configurable visible and secure with HTML markup and journaling) -fire text at bighapys like java client can view recilines while editing) -Autowe Design structure and files to Autoview for reuse after first view. Agile PLM now sends design and tire the data) -style and secure with text field say of existing file view being cap for formance by storing view for reuse after first view. Agile PLM now sends design structure and files to Autoview for redering display of details and can open from any locations for a succession of the control of the data) -logical port of the data) -logical port of design objects to be put on change w/o each of the data and poen for on a decided with list of the support of design objects to be put on change w/o each of the data and poen for one designed to the reduced at a succession shows all defined short cut keys for reference) -contents the poen designed to the reduced them solid in the proposed projects and activity gate in popports. Affected items split window (moc)/co	Web Client UI: Look & Feel change	Product Portfolio Management (PPM)	Product Porfolio Management (PPM)	PLM Application Features	
nav bar reconfigured (sarch, forw/back, etc) sys utility toolbar (online docs, tools/settings) utility window (always up, drawers explode, context sensitive, keep searching regardless of primary screen drag/drop between windows wandering mouse curser wor't open windows file) - nav display (displays BOM, search results, pro) data to ref as navigate to other records) set personal preference for (sort order, inde/display filers, column order, predicted letter, colled filed with redline control dited directly on a displayed table (including copy/paste in fields) - Affected items split window (moo/eco affected item tab displays like java client can view redlines while editing) - Authorities (aller sein) - Authorities (aller edit with redline control edited directly on parent rer's and go thru C C) - Audit Status results persist (display in pop up while users continue to enter field data) - Type ahead lists (values appear based on what is typed so far) - Authorities editis (effine edit via enhanced display) - Character imit counter (counts down characters in multi text field) - Autoutte (and the counter (counter (counter) - Coulckview enhancement (invokes popup obtows all defined short cut keys for reference) - Cereboard shortcuts help (help based popup shows all defined short cut keys for reference) - Called field story on a company of the counter (counter) - Ceclosation) - Ceclodard shortcuts help (help based popup shows all defined short cut keys for reference) - Called field story on a company of the counter (counter) - Called field story on a company of the counter (counter) - Called field story on a company of the counter (counter) - Called field story on a company of the counter (counter) - Called field story on a company of the counter (counter) - Called field story on a company of the counter (counter) - Called field story on a counter	-tool bars updated and moved	<u>Features</u>	<u>Features</u>	-Edit Icon to Saved Search (edit search	
s-sy suffly toolbar (online docs, tools/settings) -utility window (always up, drawers explode, context sensitive, keep searching regardless of primary screen) -drag/drop between windows -wandering mouse curser won't open windows -early data to ref as navigate to other records) -set personal preference for (sort order, hide/ display 6DM, search results, proj data to ref as navigate to other records) -set personal preference for fort order, hide/ display filters, column order, preference views) -cetit directly on a displayed table (including cony/paste in fields) -Affected tems split vindow (mcc/eco affected tiem tab displays) like java client can view redlines while editing) -Autoruse Design structure optimized when viewing for performance by storing view for redefied directly on parent rec's and go thru CC -Audit Status results persist (dalps) in pop up while users continue to enter field data) -Type ahead lists (values appear based on what is typed so far) -Character limit counter (counts down characters in multi text field) -Quickview enhancement (invokes popup display of details and can open from any location) -Cardo & Design Data Model Improvements -EC MCAD. (in 9.3.4 with EC MCAD 3.4 structure data is moved into structure table for dargation possible of the design structure dependencies) -Project navigator in GANTT (and remove lock union kprojects via navigatori) -Resource GANTT (management (pre-defined and custom level filters based on visible attributes, noath (refused in the display) -Signoff role resolution (default block user from executing modify request id- tocketed) -Task GANTT (wiew improved for productivity (two added columns to manage resource table, added threshold line to utilization, improved table, added threshold line to utilization, improved resource allocation logic in templates, proprieds savanitate on visible and entire projects via an unick projects via an av	-new dashboard a tab	-PPM calendars (administrators can define	-GANTT multi project (enabled for multi-	w/o having to run it)	
-utility window (always up, drawers explode, context sensitive, keep searching regardless of primary screen) -drag/drop between windows -wandering mouse curser won't open windows (fix) -nav display (displays BOM, search results, projed ata to ref as navigate to other records) -set personal preference for (sort order, inde/display filters, column order, preference views) -context deficit directly on a displayed table (including copy/paste in fields) -Affected items split window (mco/eco affected item tab displays like java client can view redlines while editing) -Affected items split window (mco/eco affected item tab displays like java client can view redlines while editing) -Attribute redlining (fields with redline control edited directly on parent rec's and got thru Cp-Audit Status results persist (display in pop up while users continue to enter field data) -Type ahead list (values appear based on what is typed so far) -Audit Status results persist (display in pop up while users continue to enter field data) -Type ahead list (values appear based on what is typed so far) -Audit list edits (define edit via enhanced display of details and can open from any location) -Revboard shortcuts help (help based popup shows all defined short cut keys for reference) -Revboard shortcuts help (help based popup shows all defined short cut keys for reference) -Project navigator in GANTT (and remove lock unlock project valor and resource short with even on visible and custor in GANTT) -Audit is project navigator in GANTT (immediately and unison wish on visible and creates new copy.) -Project navigator in GANTT (and remove lock unlock project valor and unison visible and surgitation on visible and surgitation of the season of the visible and secure with HTML markup and journaling) -HTML in PX (extension messages (now configurable in admin preferences to publish thim) -HTML in PX (extension messages (now configurable in admin preferences to publish thim) -Succidence in marking from Pkt word and under the defined short under the d	-nav bar reconfigured (search, forw/back, etc)	multiple working day calendars for exceptions	project GANTT launch. Multi-project GANTT	-Shows routed date in workflow	
delete privileges on activities. New refresh from PLM option, read only shows successor's column. Workflow status change triggered on save. Duplicating completed task creates new copy.) -nav display (displays BDM, search results, projudata to ref as navigate to other records) -set personal preference for (sort order, hide/display litters, column order, preference views) -edit directly on a displayed table (including comy/paste in fields) -Affected items split window (mco/eco affected items split window (mco/eco affected items split window (mco/eco affected item tab displays like java client can view redited directly on a parent rec's and go that Colaracter limit counter (counts down characters in multi text field) -Audit Status results persist (display in pop up while users continue to enter field data) -Type ahead lists (values appear based on what is type do so far) -Audit status results persist (display in pop up while users continue to enter field data) -Type ahead lists (values appear based on what is type do so far) -Audit list edits (define edit via enhanced display) -Character limit counter (counts down characters in multi text field) -Character limit counter (counts down characters in multi text field) -Quickview enhancement (invokes popup display of details and can open from any location) -EC MCAD & Design Data Model Improvements at subsept of details and can open from any location) -EC MCAD & Design Data Model Improvements and provided the control exception from server provides user with view to single polyects to be put on change w/or rendering mouse curse which is to shage triggered on sarigator) -Resource GANIT management (pre-defined and custom level filters based on visible antibuscy in GANIT (immediately blocks user from executing modify request if checked) -Task GANTT view improved for productivity (two added columns to manage resource table, added columns to manage resource table, added columns to manage resource table, added columns to management of program and resource allocation logic in	-sys utility toolbar (online docs, tools/settings)	to working/non-working days)	view and update including inter-project		
drag/drop between windows -wandering mouse curser won't open windows (fix) -wandering mouse curser won't open windows (fix) -wand display (displays BOM, search results, pro) data to ref as navigate to other records) -set personal preference for (sort order, blied/display filters, column order, preference views) -edit directly on a displayed table (including copy/paste in fields) -Affected Items split window (mco/eco affected item tab displays like java client can view redlines while editing) -Attribute redlining (fields with redline control edited directly on parent rec's and go thru CC) -Audif Status results persist (display in pop up while users continue to enter field data) -Type ahead lists (values appear based on what is typed so far) -Multi list edits (define edit via enhanced display) -Automatic pagination on search (rather than cycle between page, now scroll) -Quickview enhancement (invokes popup location) -EC MCAD. (in 9.3.4 with EC MCAD. 3.4 structure data is moved into structure tab for datable values appear based on on what is tastus on awail in Quickview in CAD tool, duel log in no longer required when logged into EEC MCAD. (in 9.3.4 with EC MCAD. 2.4 gip PLM logged in too. New silent client installer avail.) -EC MCAD define diffined short cut keys for reference.) Agile PLM logged in too. New silent client installer avail.)	-utility window (always up, drawers explode,	-PPM GANTT improvements (check, create &	dependencies)	tab. Will also sort by routed date)	
cdrag/drop between windows wandering mouse curser won't open windows (fix) nav display (displays BOM, search results, proj data to ref as navigate to other records) -set personal preference for (sort order, hide/display filters, column order, preference wiews) -edit directly on a displayed table (including copy/paste in fields) -Affected items split window (mco/eco affected item tab displays ilike java client can view reclimes while users continue to enter field data) -Type ahead lists (values appear based on what is typed so far) -Muttl list edits (define edit via enhanced display) -Character limit counter (counts down characters in multi text field) -Character limit counter (counts down characters in multi text field) -Quickview enhancement (invokes popup display of details and can open from any location) -Keyboard shortcuts help (help based popup shows all defined short cut keys for reference) -Keyboard shortcuts help (help based popup shows all defined short cut keys for reference) -EC MCAD . Rober and the counter (counts down characters in multi text field) -Response (at the counter (at the control of the counter (at the co	context sensitive, keep searching regardless of	delete privileges on activities. New refresh	-Project navigator in GANTT (add remove lock	-Additional numeric formats (before	
-wandering mouse curser won't open windows (fix) -nav display (displays BOM, search results, proj) data to ref as navigate to other records) -set personal preference for (sort order, bide/display filters, column order, preference ocities) -edit directly on a displayed table (including copy/paste in fields) -Affected items split window (mco/eco affected item split window (mco/eco affected	primary screen)	from PLM option, read only shows successor's	unlock projects via navigator)	were only 2 formats, now add'l. period	
copy.) Ana display (displays BOM, search results, projotata to ref as navigate to other records) -set personal preference for (sort order, preference with HTML markup and journaling) -edit directly on a displayed table (including copy/paste in fields) -Affected items split window (mco/eco affected item tab displays like java client can view redlines while editing) -Auturouse Design structure and files to Autoview for redering is speaked its to effect filed at a signal with redline control edited directly on parent rec's and go thru CCJ -Audit Status results persist (display in pop up while users continue to enter field data) -Type ahead lists (values appear based on what is typed so far) -Automatic paintain on search (rather than cycle between page, now scroll) -Character limit counter (counts down characters in multi text field) -Automatic paintain on search (rather than cycle between page, now scroll) -Culcikview enhancement (invokes popup display of the counter) (can do an open from any location) -EXPORACE AB Design Data Model improvements shows all defined short cut keys for reference. -EX MCAD & Design Data Model improvements file play logged in too. New silent client in status and can open from any location) -Expoards and period as decimal) -Signoff role resolution (default blocks user from executing modify request if checked) -Task GANTT (time directly on form of productivity (two added columns to manage resource table, added threshold line to utilization to find overloaded assignments, added more toolitips regarding utilization, improved resource allocation logic in templates, and active projects) -Better effective management of programs and resource balancing (latest load option from age sure reported suser with view to simulate changes, can insert activity gate in popup rather than inline, root parent info added to toolitip in resource view to see differing assignments. -EC MCAD & Design Data Model improvements effective preformance. Checkout display of details and can open from any location) -EC M	-drag/drop between windows	column. WorkFlow status change triggered on	-Resource GANTT management (pre-defined	as decimal separator, period as	
-nav display (displays BOM, search results, proj data to ref as navigate to other records) -set personal preference for (sort order, bide/display filters, column order, preference views) -edit directly on a displayed table (including copy/paste in fields) -drifected items split window (mco/eco affected item tab displays like java client can view redlines while editing) -Autribute redlining (fields with redline control edited directly on parent rec's and go thru CC) -Audif Status results persist (display in pop up while users continue to enter field data) -Type ahead lists (values appear based on what is typed so far) -Multi list edits (define edit via enhanced display) -Character limit counter (counts down characters in multi text field) -Autowice between page, now scroll) -Quickwiew enhancement (invokes popuy display of revision to/from dates listed in Item header) -Course Authoring (large text fields available across all Agile PLM objects, are configurable visible and secure with HTML markup and journaling) -HTML in PX (extension messages (now conflicts and secure with HTML markup and journaling) -HTML in PX (extension messages (now configurable in admin preferences to publish html) -Autovue Design structure (optimized when viewing for performance by storing view for reuse after first view. Agile PLM now sends its typed so far) -Pope haed lists (values appear based on what isst yped so far) -Character limit counter (counts down characters in multi text field) -Quickwiew enhancement (invokes popuy display of feetisles and can open from any location) -EC MCAD & Design Data Model Improvements -EC MCAD & Design Data Model Imp	-wandering mouse curser won't open windows	save. Duplicating completed task creates new	and custom level filters based on visible	thousands, apostrophe as thousands	
Act to ref as navigate to other records) -set personal preference for (sort order, hicke/display) filters, column order, preference views) -ditide/displayed table (including copy/paste in fields) -Affected items split window (moo/eco affected item split window (moo/eco affected ite	(fix)	copy.)	attributes, modify privilege in GANTT)	and period as decimal)	
-content Authoring (large text fields available across all Agile PLM objects, are configurable views) -edit directly on a displayed table (including copy/paste in fields) -defected items split window (mco/eco affected items split window (mco/eco affected items tab displays like java client can view redlines while editing) -Authorities difficiling (fields with redline control edited directly on parent rec's and go thru CC) -Audit Status results persist (display in pop up while users continue to enter field data) -Type ahead lists (values appear based on what is typed so far) -Multi list edits (define edit via enhanced display) -Character limit counter (counts down characters in multi text field) -Automatic pagination on search (rather than cycle between page, now scroll) -Quickview enhancement (invokes popud display of details and can open from any collepton) for collepton display of details and can open from any display of details and can open from any location) -Keyboard shortcuts help (help based popup shows all defined short cut keys for reference) -Content Authoring (large text fields available across all Agile PLM objects, are configurable in admin preferences to function that the mack pand journaling) -HTML mrkup and journaling) -HTML in PX (extension messages (now collips and being and viewfile operations) -HTML in PX (extension messages (now collips and being and viewfile operations) -Autowe Design structure (optimized when viewing for performance by storing view for reuse after first view. Agile PLM now sends design structure and files to AutoView for reuse after first view. Agile PLM now sends design structure and files to AutoView for redefing) -Display of revision to/from dates listed in Item header (shows intended effectivity periods in item header) -CMCAD & Design Data Model Improvements singments) -EC MCAD & Design Data Model Improvements singments in multi text field across all Agile PLM long view for reuse after first view. Agile PLM long view for revision to/from dates listed in Item header	-nav display (displays BOM, search results, proj		-Modify Privilege in GANTT (immediately	-Signoff role resolution (default	
across all Agile PLM objects, are configurable visible and secure with HTML markup and journaling) -HTML in PX (extension messages (now configurable in admin preferences to publish them) -Affected items split window (mco/eco affected items that displays like java client can view redlines while editing) -Attribute redlining (fields with redline control edited directly on parent rec's and go thru CC) -Audit Status results persist (display in pop up while users continue to enter field data) -Type ahead lists (values appear based on what is typed so far) -Multi list edits (define edit via enhanced display) -Character limit counter (counts down characters in multi text field) -Automatic pagination on search (rather than cycle between page, now scroll) -Quickview enhancement (invokes popud display of details and can open from any logical open and secure with HTML markup and journaling) -HTML in PX (extension messages (now configurable in admin preferences to publish thin!) -Automatic pagination on search (rather than cycle between page, now scroll) -Quickview enhancement (invokes popud display of details and can open from any logical part) of details and can open from any shows all defined short cut keys for reference) -Keyboard shortcuts help (help based popup shows all defined short cut keys for reference)	data to ref as navigate to other records)	New PLM Application Features	blocks user from executing modify request if	hierarchy, can change, resolves	
views) visible and secure with HTML markup and journaling) visible and secure with HTML markup and journaling) -Affected items split window (mco/eco affected item tab displays like java client can view redlines while editing) -Attribute redlining (fields with redline control edited directly on parent rec's and go thru CC) -Audit Status results persist (display in pop up while users continue to enter field data) -Type ahead lists (values appear based on what is typed so far) -Automatic pagination on search (rather than cycle between page, now scroll) -Character limit counter (counts down characters in multi text field) -Automatic pagination on search (rather than cycle between page, now scroll) -Cluckiewise methancement (invokes popud display of details and can open from any logical popun shows all defined short cut keys for reference) visible and secure with HTML markup and journaling) visible and secure with HTML markup and journaling) visible and secure with HTML markup and journaling) (two added columns to manage resource table, added threshold line to utilization to find overloaded assignments, added more tooltips regarding utilization, improved resource allocation logic in templates, proposed projects and active projects) -Better effective management of programs and resource balancing (latest load option from server provides user with view to simulate changes, can insert activity gate in popup rather than inline, root parent info added to tooltip in resource view to sed differing assignments) EC MCAD & Design Data Model Improvements -EC MCAD & Design Data Model Improv	-set personal preference for (sort order,	-Content Authoring (large text fields available	checked)	conflicts on mult roles per individual)	
journaling) -HTML in PX (extension messages (now configurable in admin preferences to publish thm) -Autoruce Design structure (optimized when viewing for performance by storing view for reuse after first view. Agile PLM now sends its yeal use appear based on what is typed so far) -Multi list edits (define edit via enhanced display) -Automatic pagination on search (rather than cycle between page, now scroll) -Automatic pagination on search (rather than cycle between page, now scroll) -Quickview enhancement (invokes popup display of details and can open from any location) -Keyboard shortcuts help (help based popup shows all defined short cut keys for reference) -Iff ML in PX (extension messages (now configurable in admin preferences to publish thm) -HTML in PX (extension messages (now configurable in admin preferences to publish thm) -Autowae Design structure (optimized when viewing for performance by storing view for reuse after first view. Agile PLM now sends design structure and files to AutoView for reuse after first view. Agile PLM now sends design structure and files to AutoView for rendering) -Display of revision to/from dates listed in Item header (shows intended effectivity periods in item header) -EC MCAD & Design Data Model Improvements -EC MCAD & Design Data Model Improve	hide/display filters, column order, preference	across all Agile PLM objects, are configurable	-Task GANTT view improved for productivity	-Suscribe on file actions (now available	
-Affected items split window (mco/eco affected items split window (proposed projects and active projects) -Autroundit Status results persist (display in pop up while users continue to enter field data) -Type ahead lists (values appear based on what is typed so far) -Display of revision to/from dates listed in Item header) -Display of revision to/from dates listed in Item header) -Display of revision to/from dates listed in Item header) -Display of revision to/from dates listed in Item header) -Display of revision to/from dates listed in Item header) -Display of revision to/from dates listed in Item header) -Display of revision to/from dates listed in Item header) -Display of revision to/from dates listed in Item header) -Display of revision to/from dates listed in Item header) -Display of revision to/from dates listed in Item header) -Display of revision to/from dates listed in Item header) -Display of revisi	views)	visible and secure with HTML markup and	(two added columns to manage resource	on getfile, openfile and viewfile	
-Affected items split window (mco/eco affected item tab displays) like java client can view redlines while editing) -Autovue Design structure (optimized when viewing for performance by storing view for reuse after first view. Agile PLM now sends design structure and files to AutoView for rendering) -Type ahead lists (values appear based on what is typed so far) -Multi list edits (define edit via enhanced display) -Character limit counter (counts down characters in multi text field) -Autowae Design structure (optimized when viewing for performance by storing view for reuse after first view. Agile PLM now sends design structure and files to AutoView for rendering) -Display of revision to/from dates listed in Item header (shows intended effectivity periods in item header) -Character limit counter (counts down characters in multi text field) -Quickview enhancement (invokes popup display of details and can open from any location) -Quickview enhancement (invokes popup display of details and can open from any location) -Aeyboard shortcuts help (help based popup shows all defined short cut keys for reference) -Autowae Design structure (optimized when viewing for performance by storing view for reuse after first view. Agile PLM logged in too AutoView for reuse after first view. Agile PLM logged in too Location (latest load option from server provides user with view to simulate changes, can insert activity gate in popup rather than inline, root parent info added to tooltip in resource view to see differing assignments, improved resource allocation logic in templates, proposed projects and active projects) -Better effective management of programs and resource balancing (latest load option from server provides user with view to simulate changes, can insert activity gate in popup rather than inline, root parent info added to tooltip in resource view to see differing assignments, improved resource allocation logic in templates, can insert activity gate in popup rather than inline, root parent info added to tooltip in resou	-edit directly on a displayed table (including	journaling)	table, added threshold line to utilization to	operations. Supported in SDK, also	
html) -Autovue Design structure (optimized when viewing for performance by storing view for reuse after first view. Agile PLM now sends design structure and files to AutoView for rendering) -Display of revision to/from dates listed in Item header (shows intended effectivity periods in item header) -Automatic pagination on search (rather than cycle between page, now scroll) -Quickview enhancement (invokes popup shows all defined short cut keys for reference) -Agile PLM logged in too. New silent cleint installer avail.) -Autovue Design structure (optimized when viewing for performance by storing view for reuse after first view. Agile PLM logsed in too. New silent cleint installer avail.) -Autovue Design structure (optimized when viewing for performance by storing view for reuse after first view. Agile PLM logsed in too. AutoVue

- -Web client time out (now a setting by admin)
- -Date & time stamp (set to do data/time or date)
- -Create notifications (create and link events for notification can customize events)

New Application Features

- -Thumbnails (viewable in key tables to scroll thru for quick views on any object table, also a thumbnail navigator display)
- -Discussion record (allows user to invite users to topic discussion and capture comments then assign action items)
- -PPM and MS Project co-existence (config out puts for ppm to ppm, integration as import/export, expanded ownership flexibility: only tied to modify not grant priv.)
- -Product Collaboration: Augmented business visualization using Autovue.
- -Product Collaboration: ECR redlining
- -File handling (enabled restarts for up/download of files. Option to specify valid URL prefix and file types)
- -IP Management (attachment IP reporting attachment by user, attachment history, and user history reports)
- -Requirements traceability & innovation management (shows item rev specific relationships)
- -Expanded attributes (page 2 att's extended, up to 10 multitext attr's to change aff item tab, fixed export issues)
- -Product Cost Management: (user saved price point defaults, update of QPA on item table)
- -PG&C: improved PGC weight rollup performance
- -ACS only (XSLT transformation if Changecast output is needed ... CC is dropped)

Platform Changes

- -Coordinated products (AIA 11.5 added, EC/MCAD 3.2 not supported must go to 3.3. Oracle Mobile patch)
- -Technology support (IE 9, 10, Chrome 18, 27, Safari 5,6. Weblogic 12.1.1 n/c. Oracle DB

Platform Changes

- -Web services stack (stack changed from AXIS to JAX-WS)
- -File transfer (works with HTML5 in IE)
- -updated to use Oracle db's (12cR1 and 11GR2)
- -Web browser (Firefox v21 on windows, Safari 7 and 6 on MacOS, IE 11 and 10 on windows, Chrome 27 on windows)
- -server OS (Oracle Solaris 11 and 10, Oracle Linux 6 and 5, Red Hat Linux 6 and 5, MS windows Server 2012 and 2008 R2, IBM AIX 7.1 and 6.1, USE Linux 11, HPUX11.31, certified Exadata db and Exalogic app server)
- -AutoVue for Agile (Autovue for Agile PLM 20.2.3)
- -Server Virtualization (Oracle VM 3 w/ Oracle Linux and win Server, Oracle Solaris Containers/Zones, IBM AIX LPARs, MS HyperV)

- -for Agile 21.0 enhancements (redesigned visualization engine for shortened time to market, 3D core formats added, fidelity improvement, Creo/ProE3D performance improvements 55% and 15% respectively)
- -enable model based enterprise (supports PMI and GD&T data to reduce dev time eliminating 2D drawings into single dataset, Fosters design reuse, optimizes mfg. tolerances)
- -3D viewing support for Agile PLM Mobile (allows viewing on the go, supports 3D CAD formats-ProE/Creo, Solidworks, Inventor, JT. Avail in both iOS and Android platforms)

EC MCAD & Design Data Model Improvements

Platform Changes

- -Oracle FMW Weblogic (12c on 64 bit JDK7)
- -Database (12cR1)
- -Web Browser (Firefox ESR38 and 32 on windows, Safari 8 and 7 on Mac OS, IE 11 and 10 on Windows, Chrome 46 & 37 on Windows)
- -Server OS (Oracle Solaris 11.2+ and 10, Oracle Linux 7 and 6, Red Hat Linux 7 and 6, MS windows Server 2012 R2 and 2012, IBM AIX 7.1 and 6.1, USE Linux 11, HPUX11.31, certified Exadata db and Exalogic app server) -AutoVue for Agile (Autovue for Agile PLM 21.0.0)
- -Server Virtualization (Oracle VM 3 w/ Oracle Linux and win Server, Oracle Solaris Containers/Zones, IBM AIX LPARs, MS HyperV)

- -Smart Rule to disallow ECO release w/ outstanding redlines.
- (ReleaseChangeOrder with Affected Items warns or disallows based on redlines)
- -Smart Rule to export BOM or AML part redlines as changed or deleted and added. (If you want this recorded as a delete of the original part and an add of a new part, you can select 'Deleted and Added')

Product Porfolio Management (PPM) Features

- -Release Utilization Report (Enhanced default start and end date logic for non-object launch, retains report params including display and proposed project allocation, start/end dates retrieved from current assign/task. Added new attr to Resource Pool Utilization report)
- -Enable Multiple Resource Pool Owners (went from multi-list choice to allowing multiple owners use case)
- -Discovery Privileges mirror Attachment tabs. (team member can view attachment in Content tab w/o File Folder discovery)
- -Enhanced preference settings. (on Project Summary Page Activities)
- -Disallow status change on locked activity. (bug fix)

Platform Changes

- -Application Server-Oracle FMW Infrastructure (Weblogic)(12cR2 12.2.1.1 on 64-bit JDK 7)
- -Database Only- (Database 12cR1 (12.1.0.1+))
- -Browsers (Firefox ((ESR 45 and 38) on Windows/Linux), Safari 10, 9 and 8 on Mac OS, Microsoft Edge and Internet Explorer 11 Windows, Chrome 55 and 46 on Windows)

11gR1, R2, 12cR1. OS: Solaris, Linux, Win Server, AIX. MS HyperV virtualization added, MS Excel up to 2013 import, MS Project 2010 and 2013 to PPM)

-Autoview platform (supports Allegro 16.6, Mentor CCZ, SolidEdge ST5, Solidworks 2013, AutoCad and Inventor 2014, Revit 2011-2014, Adobe Illustrator CS4 – fixed 70 format related customer issues) -Server Operating Systems (Oracle Solaris 11.2+, Oracle Linux 7 and 6 (64bit), Red Hat Enterprise Linux 7 and 6 (64-bit)

7 AutoVue for Agile 21.0.1and Agile 21.0.0 Enhancements (Releases with Agile 9.3.6)

1-12 What's New in Agile PLM 9.3.6, Microsoft Windows Server 2012 R2 and 2012, IBM AIX 7.2 and 7.1 (POWER 64bit), SUSE Linux 12 (64-bit), Add HP-UX 11.31 (Itanium64), Also certified on Exadata (database) and Exalogic V2 (app server)

AutoVue for Agile. (Oracle AutoVue for Agile PLM 21.0.1 Server Virtualization, Oracle VM 3 with Oracle Linux, Solaris, and Windows Server, Oracle Solaris Containers/Zones, IBM AIX LPARs, Microsoft HyperV)

AutoVue For Agile 21.0.0 & 21.0.1

- -Applet Remediation (AutoVue client is now launched using the Web Start Technology)
- -New format support (CatiaV5-6R2015, SolidEdge ST8, Inventor 2016, AutoCAD 2016 and 2017, SolidWorks 2016, Adobe Acrobat DC 2015)
- -View Files in Separate Viewer (Windows settings now determine new window or reuse of current window to view files)
- -Moble 3D streaming files. (21.0.0 includes 3D streaming files in the mobile client)
